#### GREEN POLICY OF POLBA MAHAVIDYALAYA

The Green Policy of Polba Mahavidyalaya seeks to enhance environmental sustainability via many activities, cultivating a culture of ecological responsibility among students and staff, and positively impacting the local community.

Concise Overview: Polba Mahavidyalaya, established in 2005, is an undergraduate degree institution The college is dedicated to maintaining a clean and environmentally sustainable campus from the outset. The green campus strategy not only aids in sustaining ecological balance but also benefits the community by encouraging a healthier atmosphere

### Environmental Policy of Polba Mahavidyalaya:

The Green Policy of Polba Mahavidyalaya is as follows:

- Over 40% of the campus area is comprised of greenery
- 2. The trees comprise numerous varieties of both environmental and economic significance
- The college sustains its greenery with the involvement of members and volunteers from the Eco Club, NSS, and the Environmental Sustainability & Strategy Committee.
- 4. The Eco Club, NSS, and Environmental Sustainability and Strategy Committee organize awareness programs regarding the significance of trees and a sustainable environment, such as Earth Day, Environment Day, and Ozone Day.
- 5. Each year, with the assistance of members and volunteers from the Eco Club, NSS, and the Environmental Sustainability and Strategy Committee, an afforestation program is implemented to enhance the extent of greenery.
- 6. The local panchayat is engaged in the collection and transportation of all forms of waste designated at certain locations and designated bins (degradable and non-degradable).
- Precipitation Harvesting is employed for the preservation and sustainable utilization of water
- The college has a garden specifically designed to cultivate herbal herbs, fruits, and other significant flora. The college also maintains a flower garden and a vegetable garden.
- Electricity-efficient lighting are utilized to conserve electricity. Measures are implemented to install solar energy-based lighting and equipment in the future
