

7.1.2(3)

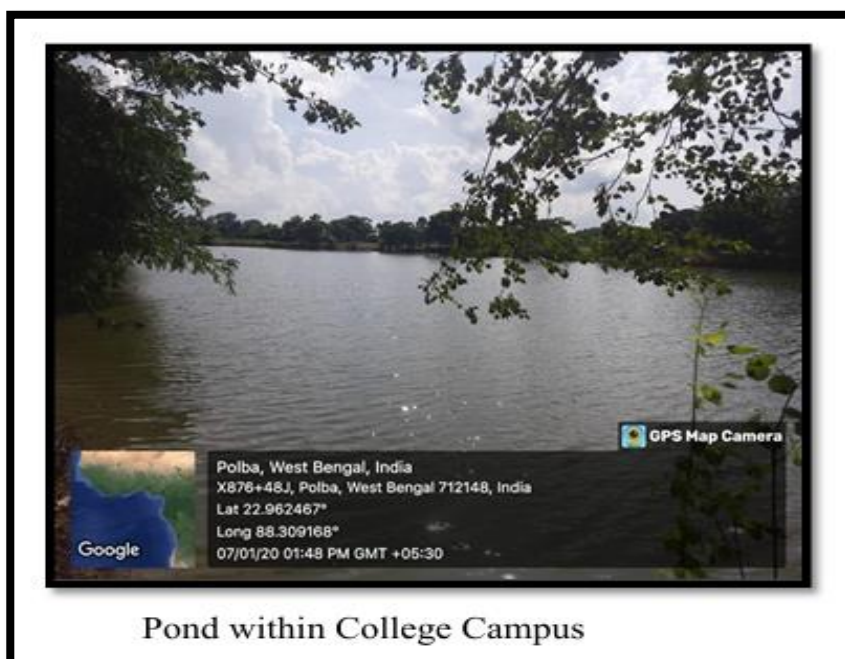

Water conservation

We have a functional rain water harvesting mechanism with pump. Water from it is used for plantation activities.

We have large sized pond within the campus, which is maintained and assists in water conservation. That helps in maintaining the ecosystem, while the water is also used in cleaning and plantation purpose.

We also have 04 overhead/rooftop water tanks that assist in saving underground water.

Underground water is utilized through bore-wells.

Building Overhead Water Tanks
